Response to Arguments

1. Applicant's arguments, see Appeal Brief, filed August 30, 2007, with respect to claims 1-20 have been fully considered and are persuasive. The U.S.C. 102 (b) rejection of claims 1, 3, 4 and 10, and the U.S.C. 103 (a) rejection of claims 2, 5-9, 11 and 15-18 have been withdrawn.

Allowable Subject Matter

2. **Claims 1-20** are allowed, and are renumbered **claims 1-3, 6-11, 14, 15, 18-20, 4, 5, 12, 13, 16 and 17**, respectively.

3. The following is an examiner's statement of reasons for allowance:

Consider **claims 1, 4, 10 and 12**, the most relevant prior art of record, Zdunek et al. (4,870,408) in view of Watanabe et al. (6,122,292), fails to first convert voice and data carriers into voice only carriers based on a threshold.

Zdunek et al. clearly show and disclose a method to dynamically allocate a number of data channels on a trunked radio (voice/data) system **100** and to redistribute or balance data traffic load on the particular number of data channels currently available (column 2 lines 20-25, column 3 lines 11-12). The data activity is monitored during a predetermined interval and if the data activity is above a predetermined maximum, (establishing a maximum load value for at least one of a voice or data traffic on a carrier; establishing a nominal value for acceptable quality of communications) (column

2 lines 20-25 and 32-36). If data traffic is low, a data channel is reallocated for voice message only providing superior access time and system performance (maintaining loading on said carrier at a level no greater than said established maximum load value by converting said carrier to voice-only traffic) (column 2 lines 37-44). The network comprises at least one host computer **106**, which is coupled to a network controller **108** that monitors the activity on the data channels, and communicates with a central controller **102** that monitors the voice activity (column 3 lines 34-38, column 5 lines 27-29). If the central controller determines that voice activity has exceeded a predetermined threshold, the central controller requests the network controller to relinquish a data channel (converting said carrier to voice only traffic upon exceeding said established maximum load value, wherein said established maximum load value is a threshold defined to ensure acceptable quality of communications) (column 5 lines 38-41).

Watanabe et al. clearly show and disclose in the on-demand band, the trunks and the channels are divided into those for voice and those for data, and in the fixed allocation band, the trunks are likewise divided into those for voice and those for data (voice and data traffic). Observing traffic in each band in a predetermined interval, and based on the traffic from time to time, changing the ratio of the division for voice and for data regions. Widening the band for voice communication during the daytime when the amount of telephone use is heavy, and widening the band for data communication during the nighttime when the amount of telephone use is small (converting said carrier to voice only traffic upon exceeding said established maximum load value, wherein said

established maximum load value is a threshold defined to ensure acceptable quality of communications) (column 2 line 58- column 3 line 2).

Zdunek et al. in view of Watanabe et al., lack the explicit claimed limitation of "converting said carrier from voice and data traffic to voice-only traffic," therefore this limitation, in further in view of the BPAI decision of 11/27/09, is considered novel and unobvious in view of the combination of Zdunek et al and Watanabe et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
